DETAILED ACTION

1. Claim 1 is pending and under examination in this office action.

Priority

2. Applicant's priority claim to provisional applications 60/071676 and 60/044886 is acknowledged. However, the claimed sequences do not appear in these applications and the priority date for this invention is thus that of 09/066745, 24 April 1998.

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(c) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

4. Claim 1 is rejected under 35 U.S.C. 102(e) as being anticipated by U.S. patent application 2003/0082677.

2003/0082677 discloses SEQ ID NO: 4 (murine EDIRF 1), which is identical to instant SEQ ID NO: 12. See paragraph 0082, figure 2, and the sequence listing. The signal sequence is described in paragraph 75; thus the application also teaches the sequence of instant SEQ ID NO:

39. The sequence and signal sequence are disclosed in figure 2 of a parent application, 08/994890, filed December, 1997. The sequence alignment is attached.

NO CLAIM IS ALLOWED.
